

Corporate Policy Statement: Global Environmental Policy

Effective Date – 17.Sep.2024. Last Updated – 03.Mar.2026.

OUR POLICY COMMITMENT

At Dun & Bradstreet (D&B) we are committed to doing business with the highest standards of business ethics, which includes promoting sustainability throughout our global practices and operating in a way that reduces the impact we have on the environment.

This Policy establishes our baseline environmental principles and operating standards which align with our Environmental, Social & Governance (ESG) strategy. Team members and management are required to follow this Policy and play their part in fostering a workforce that is aligned with D&B's corporate ESG efforts.

We will continue to comply with the environmental requirements of regional regulatory bodies. This Policy will be superseded by any law, rule, regulation, or contractual obligation that necessitates a higher standard than those outlined in this Policy.

PRINCIPLES AND OPERATING STANDARDS

The following eleven Principles and Operating Standards guide the way we work to meet our Policy Commitment.

1. **Environmental Data Management:** We are committed to maintaining accurate, reliable, and transparent environmental data to support our sustainability objectives and regulatory compliance.
 - 1.1. **Environmental Management Systems:** We are committed to implementing structured frameworks that support effective environmental management across our operations.
2. **Energy Efficiency:** We reduce energy consumption at our offices by adopting energy-efficient technologies such as automated and dimmable lighting and controlled heating solutions.
 - 2.1. **Renewable Energy Deployment:** Where possible, we ensure our offices and data centers utilize renewable energy.
3. **Water Consumption:** We reduce water consumed in our offices by selecting offices with, or installing, low-flow water fixtures, in addition to features such as sensor-controlled faucets in the bathrooms and kitchens
4. **Waste Management:** Waste produced by Dun & Bradstreet is predominantly due to use of our office spaces
 - 4.1. **Electronic Waste Management:** Dun & Bradstreet's most significant waste stream is electronic waste (e-waste). To address this, we maintain a global e-waste program supported by an internal E-Waste Policy, which governs the end-of-life handling of all technology assets owned by Dun & Bradstreet
5. **Data Center Emissions:** Data centers play a critical role in Dun & Bradstreet's ability to provide reliable and high-quality solutions to our clients
6. **Product Governance & Sustainability:** In addition to utilizing energy-efficient data services for hosting, storing, and distributing our digital products, we factor in environmental and social impacts when creating new products and services.

7. **Responsible AI:** Dun & Bradstreet utilizes Artificial Intelligence (AI) within several of our solutions. We are committed to working with data centers and other third-party vendors that are actively engaged in reducing the environmental impact of AI within their operations.
8. **Business Travel:** We have an established Global Travel and Entertainment Policy which encourages team members to take more sustainable modes of transport where there is the option to do so and only approve business travel when necessary
9. **Company Vehicles:** We reduce emissions produced by our owned and leased company vehicles by decommissioning our corporate fleet where possible and encouraging team members to use more efficient and sustainable options through D&B's car allowance program
10. **Value Chain Sustainability:** We partner with third parties that meet our environmental expectations; environmental standards are integrated in the procurement process when considering new suppliers.
11. **Climate Risk:** Environmental-specific risks are part of our overall risk universe, integrated into our Company-wide risk management process, and considered under the same time horizons as the rest of our strategic planning.
12. **Business Continuity Management:** We recognize the potential impacts of climate change on D&B's financial performance and have integrated environmental considerations into our Business Continuity Management (BCM) program.
13. **Training:** Upon onboarding, and every year they are employed at Dun & Bradstreet, team members are required to review and affirm our Code of Conduct & Ethics, which includes expectations for environmental protection.
14. **Community Engagement:** Environmental sustainability is one of the focus areas under our corporate social responsibility program, Do Good.
